

Easy Learning Plasma Teaching Series

Class 2

Part 1 – Current KF Activities and Agriculture Development

Welcome Back

Welcome back to Class number 2 of Easy Learning Plasma Science. We hope that you had a chance to ponder over all that was presented in class 1. The structure of the classes will be in 2 parts, the first part is to bring you up to date on current developments of the KF, so that you understand that these amazing things you are seeing and hearing about are not imagination, they are in reality, happening, right now in our world, and that you are a part of it. Included in this will be different easy and practical applications, of how you can use the plasma and Gans technology in your daily life. The second part will focus on helping you to understand how the plasma works and fill in the gaps of our knowledge about the Universe, that our modern science has not yet reached. For this to happen we need some kind of interaction between the presenters and the listeners, a circular flow between those who are sharing the knowledge and those receiving it, so that they can further share it. This structure, we'll find out, is in fact, how the Universe works, what we call M and G. Because we are not teaching in person, this makes it more difficult. But we will find a way, where at least, when you have a question or want to share something, we will give you a place to write to. So, we hope that you will make an effort to get more involved with these teachings.

Keep in mind that this new era of science and universal knowledge that is opening up, requires a new way of teaching and learning, other than the traditional way of memorizing facts and figures, which are cold and have little relation with our lives and hearts. This is where plasma science is very, very different. We may be surprised to discover that we are already intimately connected to the plasma without our even knowing about it.

Plasma in Agriculture

This week we'll discuss a little about what is happening in Brazil with agriculture. However, before we begin we should give a little background about how plasma in agriculture works. Thanks to Jim McDonald, the head of KF in Australia, he let us read his new book, "The Future of Agriculture," to help us get some background material. We'll cover it in details in later teachings.

<https://keshe.foundation/>

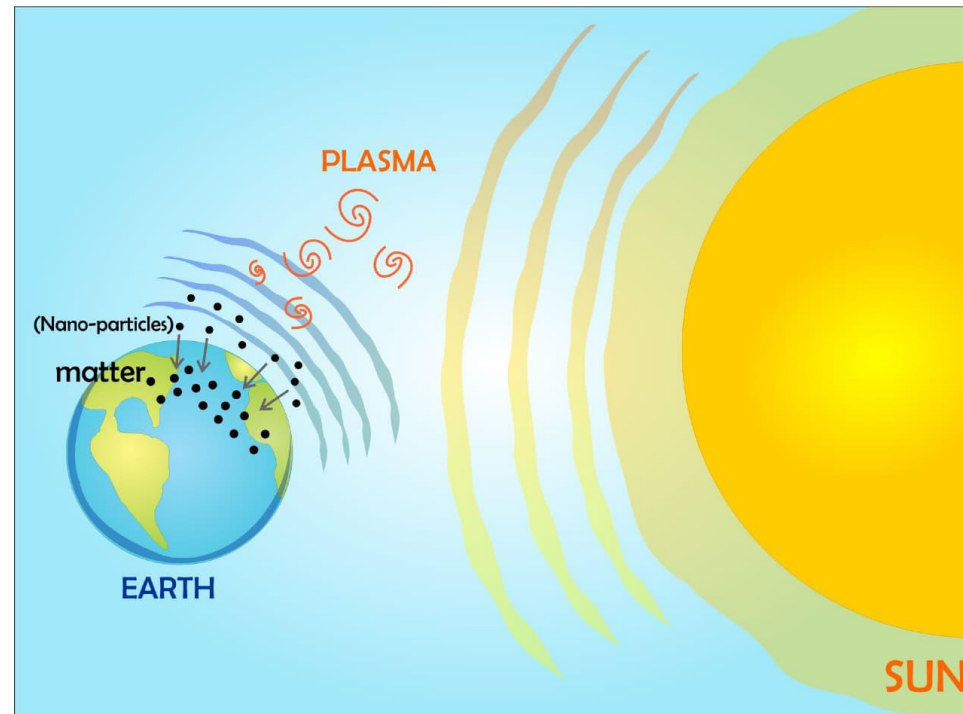

<https://kfssi.education/>

<https://spaceship.institute/>

Understanding the Creation of Matter in our Planet.

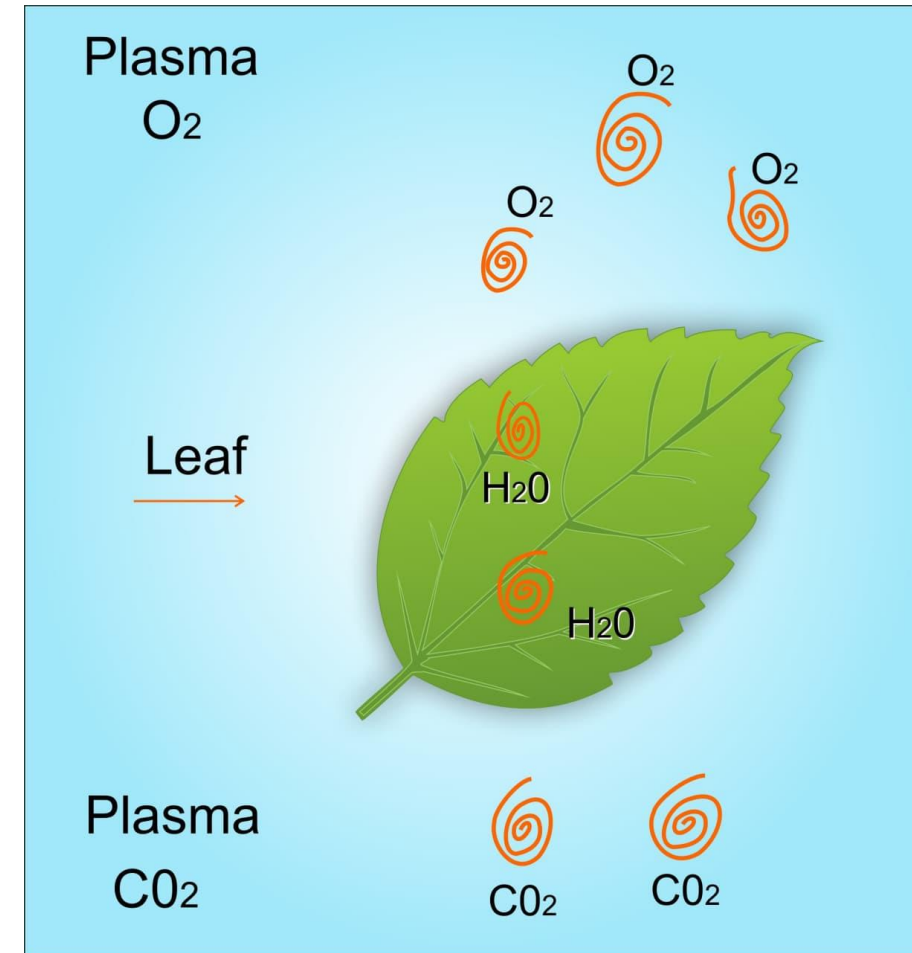

Our scientists are not absolutely sure how the matter of the planet was formed, but some think that debris floating around space got attracted by the earth's gravitational field and started accumulating over millions of years. In plasma science we now understand that matter is created out of the interaction of the plasmatic fields between the Sun and the Earth. For now we won't talk about Inertia and those things, but just, that the fields slowed down enough and lost enough energy, that they started to manifest as "plasmatic elements." Remember from last teaching, that when the fields find a partner to dance with, and they really like each other, then they can form a plasma. These plasmas can later become matter in the upper atmosphere, something like Nano-particles, they cannot be seen by the naked eye, and then they come down to the earth in rain. If this is true, then it is going to be a huge change in the way we look at life on this planet. For instance, we don't need to be mining minerals to create chemical fertilizers to put on plants for them to grow. Why don't we learn which field strengths are needed to create the necessary nutrients and then apply the fields directly to the plant itself.

New Development: Our scientists recently discovered Nano-particles throughout the atmosphere, and they think that this is due to pollution. But Mr. Keshe explained, that this how matter state is formed on our planet. Matter is created in the upper atmosphere through field interactions and literally rains down on the planet.

Plants Only Takes What it Needs Accordingly With its Emotion

This is one way the knowledge will help us. Another way, is to learn how the plants actually feed themselves. This is a lot to take in all at once, but let's take a risk and say it anyway. They tell us that plants get the minerals, nutrients, and water by their roots through a process called osmosis. This means, that we were taught to believe, that through this magical process, the molecules and elements themselves, actually cross over into the plants. And to make it even more convincing they say, there are these little gates that open and close. And I always wondered why, nobody could ever show these mystery gates. What we are discovering through the plasma science, is that no matter state ever crosses over into the plant, rather the MG field strength of the element crosses over, and the matter state, in the form of Gans, is manifested inside the plant, if it has a need for it. Otherwise the fields just remain as fields for somewhere else. The plant will only take in what it needs to live, according to its emotion. Now I threw a fast ball in there (baseball term), I said, EMOTION. Oh, my ... this is a big no, no. You are never to mention emotion in what we call science. But they had to be put somewhere, so they tucked them away in a place called, Psychology. But you know, mainstream scientists, don't like to take psychology too seriously.

Is Science Really this Easy?

As I said, this is a lot to take in. But what if it triggers something inside you? What if you get really curious and start asking questions? Is this really true? Could it be? Is science really this easy? No mathematical formulas to figure out. It is really up to you. Nobody can stop you from learning, except that little voice inside that says, "no, you are not good enough, leave it to the experts." Others can do it, but not me. Why don't we all tell that voice - Goodbye.

Now let's look at what people have done and their real life experiences here in Brazil with plasma in agriculture. When you see these extraordinary testimonials, rather than just saying, "wow," keep in mind what we were just talking about. This is a science, not a magic show, and you can learn how it works.

Gans Plasma Water Testimonials

The following Knowledge Seekers (KS) decided to try using the Gans plasma water from the Cup of Life #1 on their plants. Even though the Cup of Life (CL) #1 is specifically designed for the Coronavirus it has shown that it works very good on plants also. This could possibly be due to the Zn plate and the Nano coated coil which are the plasmatic conditions for making CO₂ and ZnO Gans. It has been noticed that through the use of this water, there is a significant improvement in the growth, vitality, and rooting of the plants.

Gans Plasma Water Testimonials:

Case #1: Reverses GMO

Case #1: Daiane with Papaya's and Tomatoes (Reverses GMO)

Daiane is a KS who is also an agricultural engineer and has studied irrigation in the area of the sub-medium of São Francisco. She used Gans water of CL 1 with transgenic papaya. This means that this papaya species was genetically modified to be smaller in size so as to increase its market acceptance value.

The conditions prior to spraying the papaya was that of very low quality fruit, low sugar content, fibrous internal texture, short shelf life, and it's size was smaller than 12 cm.

Results:

After the use of the Gans plasma water the plants were found to have excellent sugar content, high productivity, and the size of the fruits increased to more than 30cm (Figure 1). The most interesting result was yet another proof that what Mr. Keshe taught us years ago is correct. Apparently, the fruit was restored back to its original state before the genetic modification. The genetic modification was to make the fruit smaller, and now after use of the Gans water it went back to its original size of 30 cm. It's amazing.

Method:

The papayas were sprayed with the water of Cup of Life #1, diluted in normal water at a 1:3 ratio, or 100 ml of Gans water to 300 ml of regular water. It was sprayed 3 times a week.

Gans Plasma Water Testimonials:

Figure 1. Left side: GMO Papaya without Gans water - measures about 12cm. Right side: After Gans water spraying the papaya went back to original size of 30 cm.

Gans Plasma Water Testimonials:

Tomato Experiment:

Daiane always had a problem with her tomatoes, that would get infested with a pest, a small worm that drills into the tomato, in Brazil they're called tomato drill (see Figure 2.1). She decided to do the same method of experiment as with the Papaya. She diluted Gans water from CL 1 in a 1:3 ratio, and sprayed them 3 times a week. She had amazing results. The fruit increased in quality and size. Not only that, but the outer skin developed a resistance so that the tomatoes drills could not do any damage. And the internal structure of the fruit was firm and had a much more longer refrigerator storage time of more than 20 days without losing quality (Figure 2.2).

Gans Plasma Water Testimonials:

Figure 2.1. Tomatoes without Gans water and with Tomato drill disease

Figure 2.2. Tomatoes sprayed with Gans water and without any disease and much tastier, and beautiful looking.

**Gans Plasma
Water
Testimonials:**

**Case #2:
Back to Life**

Case #2: Tania with Orchids and Desert Roses (Back to Life)

Another KS named Tania did some experiments with Orchids and Desert Roses. The Orchids had degraded into a very weakened state, the leaves were drying out and drooping downwards. It was so bad that her son had decided to throw them out. But then on February 12, 2021 she got the idea to try and resurrect them with the CL Gans water. She removed the old and dry leaves and started to treat them with Gans water from the Cup of Life #1. She started by wetting the Orchid a lot with regular water on the first day, but then decided to use the Gans water 3 times a day. In just 3 days the Orchids started coming back to life (Figure 3.1).

Gans Plasma Water Testimonials:

Figure 3.1. Top image on Feb 12, 2021, left side of image you can see the wilted leaves. Bottom image on Feb 15th 3 days later, you can see the leaves turning more green and coming back to life.

Figure 3.2. Left image Feb 12, 2021, you can see the wilted Orchids. Right image Feb 17th after 5 days, the Orchid has come back to life and the leaves are more green and full.

Gans Plasma Water Testimonials:

Desert Roses:

Tania had Desert Roses that would not recover even after changing the soil and trying other things back in 2019. In the photo you can see that, still in August 2020 they were in very bad condition. Then in February 2021, she started spraying them with the Cup of Life #1 Gans water, once a day. And within a very short time you can see in the bottom photo of Figure 4, they are fully alive and have become very lush and beautiful.

Gans Plasma Water Testimonials:

Figure 4. Top Left image, Aug 2020, the Roses are depleted with a yellowish color in the stem and almost dead. Top Right image, Feb 2021, Roses have fully recovered after the use of the Gans water of the Cup #1.

**Gans Plasma
Water
Testimonials:**

**Case #3: Quick
Germination**

Case #3: Soaking seeds in Gans water (Quick Germination)

A KS did an experiment by soaking bean seeds with GANS water from Cup of Life #1 (left side of photo) and regular water (right side of photo). Both of the seeds were put in a piece of cotton soaked with water. They were started on the same day and time (Figure 5.1 and Figure 5.2).

It is almost unbelievable, but the Gans soaked seed started sprouting on the first day and growing rootlets by the morning of the third 3 day, while the seed soaked in regular water had not even sprouted yet.

Gans Plasma Water Testimonials:

Figure 5.1. Left side Seed soaked in Gans water, Right Side, seeds soaked in regular water. First image Nov 29th, Gans water seed already sprouting, but not the regular water seed. The next day Nov 30th the same.

Figure 5.2: 3 Days later on Dec 1st. Left side, the seed soaked with GANS water from Cup#1 is already growing, while on Left side, the seed with regular water has not even sprouted yet. By the morning of Dec 1st Gans water seed is already growing roots, but other one has not even sprouted.

Gans Plasma
Water
Testimonials:

Case #4:
Lettuce
Revived

Case #4: Gans filled vials placed in potted plants (Revived)

Small plastic vials of CO₂ Gans was placed in the soil of a dying potted lettuce plant, and after some time it was fully restored (Figure 6).

Figure 6. Left image, the lettuce in a very bad state, wilting and dying. Right image, the lettuce with the small bottles filled with CO₂ GANS placed in the soil close to the lettuce, and now the lettuce fully recovered.

**Gans Plasma
Water
Testimonials:
Case #5: Fields
Bring Tree
Back to Life**

Case #5: CO2 Gans in Star Formation

A Knowledge Seeker, from the region of Porteirinha, north of the state of Minas Gerais, wanted to test and see if the Star Formation taught by Mr. Keshe would really work, so he decided to try it on one of his dying trees.

Hopefully, we will get around to teaching about the Star Formation at a later time, so stick with the classes. But in general, you can put your Gans's in containers, best if they are spheres, in the shape of a pyramid with 3 spheres forming a base, and one above the base. If the conditions are correct the flow of the fields will create what is known as a free plasma in the center. Here's where your intention and emotion play an important role as to the kind of fields that go out into the environment. There is a lot to explain, but for now, we can say that the star formation is a very powerful tool to bring balance to the environment. They can also be used to create the right kind of fields for plants to thrive in. As in this example, a dying tree was brought back to life.

This Star formation was made using about 5 to 10 ml of CO2 Gans in each container and supplemented with river water. A little amino acid that had been collected from the top of the saltwater during the Gans production process and had been set aside. This is a good example of when to add the amino acid back into your Gans. (Figure 7).

Gans Plasma Water Testimonials:

Figure 7. Left side, the day bottles with GANS were placed in a star formation. Right side, some weeks later you can see how beautiful the leaves are growing.

**Gans Plasma
Water
Testimonials:
Case #6: Love
Adds to Field
Strength**

Case #6: Gans in Star Formation on a Mastic tree (Love Adds to Field Strength)

Another example of using the Star Formation to recover a Mastic tree, that had for a long time failed to recover, even in periods of rain.

Plastic bottles were placed with different proportions of Gans from Cup of Life #1. The bottom 3 base containers were made with different volume ratios of B1 - 12%, B2- 6% and B3 - 3%, and the top container 6%. This gradient of field strength created a particular flow of the fields. The KS had a very deep intention to help this tree by pouring his love into it, and this you can feel in the last picture of its full recovery. This is a perfect example of how when the power of our own plasma is added to the knowledge of the Universe, then both become a great force for transformation and change (Figure 8).

Gans Plasma Water Testimonials:

Figure 8: Left side; Sept 2020 - Before the star formation was placed at the tree it was almost without leaves, and now the leaves already coming back; Center image, 1 month later, most of the leaves have come back; Jan 2021; the tree is fully recovered and thriving.

How to use Plasma at Home

Some Guidelines for Using Gans Water at Home

This knowledge is so vast that it is difficult to talk about it in a light way. And it is not nice to suggest you do things without you knowing the why and how it works. So before discussing about how to use the plasma water at home we should explain it little bit so you understand it better. I know there have been a lot of new ideas coming out today, and this is the exciting part of this science, the adventure never ends.

Mr. Keshe started teaching us about the Gans using the CO2 Gans Box. It has a matter state Zn plate and a Nano coated Cu plate connected with an LED light, and filled with saltwater. We are now finding out that there was a very specific reason he chose this way. It ends up that this is an imitation of how the leaves of the plants work. The shiny top side of the leaf is like the Nano coated Cu plate and the underside is like the Zn plate, and between the two sides, CO2 appears, not only in the Box, but also inside the leaf. This is one of the reasons why CO2 is so effective and essential in working with agriculture. It is known as a converter. It converts from the fields what is needed for the plants and then it is added to the sap which takes it around the plants. And remember, the Cup of Life #1 has a lot of CO2 in it.

Make your own GANS

I think it would be a very good idea for those interested in agriculture to make their own CO2 Gans Box. It is very easy to do and don't forget to collect the amino acid that forms on the top as an oily film. Set it aside in a small glass jar. *(For more information about the CO2 Gans Box, please, go to the KF Wiki website and type on the engine search for CO2 Gans Box).* But for right now you can start experimenting using the Cup of Life Gans and Gans water.

So to begin with, if you were to take the CO2 Gans or the CL#1 Gans and place around the plant, you would end up creating a plasma dome around it. Within this dome the plant would become very happy, because it can very easily get whatever it needs from the fields. Rather than pouring the Gans in the soil, because then it stays with that soil, you can put the Gans in containers like plastic balls, ping pong balls, plastic vials, or plastic tubing that you can form a ring around the plant. It is up to you. Use your imagination.

When you experiment try to take before and after pictures, and keep track of what you do, so that you can share it later with others.

The second easy way, as we read in the case studies is to spray the leaves and plants with Gans water. Some use a ratio of 1:3, and some spray 3 times a day. Have fun with it and then share with all of us what you discovered. These are the main ways to use the Gans but there are also some other variations.

Summary

Summary of Using the Gans on Plants:

- 1) Place Gans or Gans water in containers around the potted plants or garden to create a plasma dome of CO₂. ZnO is also good because it satisfies the emotion of the plant.
- 2) Spraying the leaves and plants with Gans water.
- 3) Place Gans balls around the whole garden.
- 4) Filling plastic tubes with different Gans's and circling the plant. They are called Gans rings.
- 5) Pouring Gans's into rivers lakes and oceans

Easy Learning Plasma Teaching Series

Class 2

Part 2 – Plasma Teaching

First of all these teachings are not certified teachings from KF, they are just a Knowledge Seekers own understanding that is being shared. Please do not memorize, but rather ponder.

I hope that you all had a chance to wonder about last week's teaching, keeping it slightly in the background as you are doing other things. We basically talked about the fields coming together, attracted by a common denominator. Mr. Keshe talks about this as, having a similar field strength. And we referred to it as having similar feelings and emotions with another. Then interaction occurs, and if the dance is strong enough it leads to a balancing of the M and G field forces, and a plasma is formed. When the plasma forms, then there is a flash of light and, as we saw in the video, the M and G field forces start circulating and we have an entity, known as a plasma. Let's watch it again.

Now, one thing you might be wondering about is, where did the rays and M fields come from in the first place. This is a very interesting question, and one that has created a lot of division and conflict in the world. In modern society, we have left it to the freedom of the individual to answer. It's like the chicken or the egg, which came first? Did a Creator create everything, or did everything come out of the Void, or is both possible, depending on ones perspective. Let's not let this topic stop us from acquiring more knowledge. As we learn more these kind of questions will answer themselves. When you start to climb a mountain, at the base you cannot see very much and may think that, that is all there is. But as you climb higher and higher, you begin to see things that you never could have imagined existed. As we approach this new science, why don't we try to stay open for the Unknown, then life's adventure will unfold itself, and it will be a great joy to wake up in the morning, and wonder, what new things will I discover today.

The concept for today's lesson is: Every plasma has both M and G fields. You take only what you need, and give what you don't need. M means to give or share, and G means to receive or accumulate.

This may sound easy to understand at first, but when you start to think about it, it is rather difficult to comprehend, especially if you have been taught unconsciously, that when you give, you loose. This idea of loosing is mainly in western hemisphere capitalistic societies and where their influence extends. Eastern societies had the understanding that when you give, you are actually benefiting yourself, by accumulating virtue, or some would call it good karma. Now we have to go beyond our filters and try to look at it from plasma science point of view.

We got used to taking more than what we need right now, and storing it for when we might need it. This mental and emotional habit creates a kind of block. And we get a sense of security from knowing that we have enough for later. If we knew that we could create anything we needed, at any time, at the point of need, from the fields, I mean anything, then, would there be a fear for survival? Would there be a need to kill anybody to get what they have? You see it's a whole new game.

On the other extreme, we were taught that one should only give, and that it is selfish and egotistical to take, and there is a slight feeling of guilt when receiving something. When people talk about for example, Mother Theresa they imply that she was a huge giver and didn't take anything back. Maybe what she received back wasn't perceivable. We think of all the rays coming out from the Sun, but we don't perceive all the fields that are going back in. When I see videos of Mother Theresa, I feel a Presence and love coming out of her, but I never stopped to think, that I also feel great love for her, and that feeling I have for her is M, which means love directed towards her plasma. So it is a circulation, it is not one way. One way is a dead end street, and probably doesn't exist anyway.

When we try to learn how to give without expecting to receive anything back, it starts out as a mental concept, a wish to be like that. When it matures and an inner change takes place in our being, then it is something that is spontaneously there. One notices it, but doesn't "think" about doing it. It's the other people who wish to be like that, they are the ones who say, "oh, so and so, just gives and doesn't expect anything in return." For the one who sits in himself, those kind of thoughts never enter the mind.

When you give, you receive back, so that you can give more. It's a cycle that grows and grows, like the Universe grows. We know this, when we love somebody and they love us back, then we in turn love them even more.

Now it can happen, that in the process of receiving, a person may start to hold onto what they are receiving. If for example, there are psychological wounds from the childhood, which have not been dealt with, or are strongly denied, an unconscious thought may enter your head, "oh, I got something." In which case, there could develop a tendency to hold on to and accumulate. This would make a person more G. Or one may mistakenly believe that because they are receiving love from outside, that now, "I have a right to exist." This is called, confirmation of existence. When you know yourself from inside, you don't need confirmation from outside. These are different types of blockages that bring imbalances to the flow of the M and G fields. In time all, the M and G fields will have to be brought back into balance. When we understand this, then instead of being a victim of the circumstances in our lives, we can become a co-creator. This is the beauty of opening to the knowledge of the creation.

So to summarize, we take only what we need, not more. No storing for a rainy day. No fear that I don't have enough or will lose something. And we give what we don't need. In the US they have something called, the garage sale, where you sell off what you don't need. That won't do. We let it go now, without fear of loss, and with love, that another being will benefit by it. And with the contentment and joy to be part of the balance of the Universe.

Conclusion:

We hope you enjoyed the teaching and are starting think a little more about the world we live in and how it could be. As you go over the teachings, please write down any questions or comments about what you felt or any doubts you may have. For now write them down and we'll find a way to open a channel of communication.

Thank you for your participation.
