

# Pain Pen Teaching Part 1

## Series of Questions Chronic Inflammation and Pain

Excerpt from 2021 02 26 Portuguese Brazil Teaching, Mr. Keshe starts at around :27 to 2:22 minutes. Note: Summary has not been checked by KF. Please listen to original recording and read English Transcription after the post. (Summary by KF Brazil)

### Summary:

The Brazilian team was working on the Easy Learning Plasma Teachings and wrote to Mr. Keshe with some questions about the Pain Pen (PP). As they were too long, we decided to present them in tonight's teaching so that everybody could learn.

Rafael presented the questions. Our purpose is to teach the Pain Pen in the Church Education teachings, so we want to be able to teach it in a very simple easy way. To do that, we need to understand it more clearly. Therefore we would like to ask you some detailed questions, if that's okay? Thank you very much.

**Q1: You taught the Pen Pain some years ago and we have listened carefully to that teaching. We understood from the teachings that the pain in the body comes about through fields oscillating in the muscle tissue, and that this creates a kind of alternating current (AC), and that the tissues around the pain have a steady current flow and not oscillating. Then you said that the double coils (M and G) in the Pain Pen is creating alternating current (AC), and that this current is directed through the tip, which is pointed at the place where the pain is. The copper in the Pain Pen connects to the copper in the muscle tissue and nerve tissue, creating a field link, and they start transferring fields. That there is no need to touch the skin because the flow in the Pain Pen will automatically find the oscillating fields of the pain in the**

**muscle. The MG fields in the Pain Pen balance out the MG fields in the nerves so they don't send back signals of disturbance to create pain. In a way, it tricks the nerves not to send pain to that area.**

**Is our basic understanding correct?**

K- Maybe if we redefine it, it will be much easier, so that it's understood in the terms of plasma. The present PP which you produce with the Nano (N) coated material has a specific characteristic, that is, in essence it's weaker in G, and stronger in M in one sense, and on one layer, and stronger in G and weaker in M on the other (layer). The PP is made of N coated Cu wire coils. You have the matter state pure Cu inside the wire itself, (which from plasma point of view is weaker), and on top of this is the N coated layer. In the PP you create a M field, which in essence is weaker than the energy of the pain in the body. The pain, which has a higher energy will deliver its energy to the Pain Pen, which will be absorbed by the N layer in trying to reach the weaker fields of the Cu inside the Pen. The PP becomes the weaker partner as compared to the pain inside the body, and that is how you take the pain out.

It doesn't send a message to the brain, telling it not to send the pain. It takes the pain out, so that the body can repair the damaged cells. This is the correct way to understand it. It's the interaction of 2 plasmatic fields. You have the Gans of the body on the inside, which is like a virus and has more energy, and the PP, which is weaker because of the matter state Cu inside it, and the stronger N layers on the outer side of it. Then the M field energy of the pain drains out into the PP, and the N layers absorb the energy to itself. This is how the pain is taken out, it doesn't send a message to the brain, not to send anymore pain. Literally, it works by taking the pain out, because the pain creates a barrier for cell repair. Then the body immediately, at the point of damage, creates the conditions for repair, and that's why the pain goes. Or sometimes the pain is due to tension or pressure on the cell. When that pain energy is taken out, then the pain is not there to be felt.

The pain is very much like the virus we see in Corona. It's a package of energy, but it sits across the environment located in the body. Like when we use the Gans water of Cup of Life on the outside of the body, in the same way we use the PP to drain the energy out. Because it is drained out, the body immediately creates the repair condition. But you might have to use it 2 or 3 times, because as the cell repairs it creates its own pain, and the PP can take that out too.

How we use the PP, is exactly how we handle the viruses. The virus is like the energy of the pain inside the body, and the PP like the Gans water or the Gans patches we put outside to extract it. The Cu inside the PP is weaker, and its N layer is stronger. In a way the energy of the Cu being weaker inside, attracts the energy of the plasma of the Gans directly through the N layer field strength into it, and then it gets absorbed by the N layer, and then it gets disposed of. This is the correct way of understanding it.

The understanding of the technology (T) has to be always on the basis of the interaction of plasmatic fields. In plasma fields of the Gans of the body, there is no AC/DC, there is

no alternating current and direct current. Everything is in the motion of the M fields, and this is what has to be understood. It's not that you look at it, and then you try to translate it into the matter state, so that you can understand it. It's a new understanding, and you should understand it as it is, by itself, and not translate it back into matter state so that it makes sense to you. In fact, when you do that, it becomes totally wrong.

This is a fundamental point in understanding all of the teachings, when you work with the plasma, only consider the plasma interaction. Do not try to transfer it, and translate it into the matter state. In plasma there is no AC/DC, no alternating current. It's always DC. The AC only comes in when you interact with the matter state. The body of the man is always in a very low level of DC current of plasma, which we don't have in the matter state, and it always has a heartbeat. This is how life is generated. A DC current with a heartbeat, which creates that pulse of a plasma, but not a frequency, as in the matter state.

This is the fundamental work of the body of the man. You have the flow of the M fields in the body, but you also have a heartbeat, which creates that pulse of fields to have different strengths. This is different then when you have AC or DC, that you have what we call, frequency on it. In the matter state, we see the penetration of the field by vibration of the electrons. In the plasma state we have the continuous flow and we create pulses. The continuous flow releases its energy through interaction. In a way, if you look at it, it's like a balloon, which you keep on hitting and the fields will flow in the balloon, but there is no current.

This is what most of the KS have not comprehended about the difference between the work of the plasma and the AC and DC, and that is why you define it like this, that it changes to AC or DC. We don't have AC/DC in plasma flow, but we have a continuous flow with the pulses. It pulses by compressing the M field, which causes them to interact with each other, and creates friction and release of energy. This is how the body has a heart(beat) and a blood flow. This is how we release energy to ourselves through the lymph flow. That's why when we stop the heartbeat, the life stops. This is the fundamental change in understanding, or the difference between the matter state and the plasma state. And the body of the man is in the plasma state. The Earth works in a plasma state. The Sun works in the plasma state, and it continuously radiates, but through the heartbeat decides what strength it'll release in different directions at the same time.

Any other question?

**Q2: Is it correct that the Pain Pen can only help certain types of pain, like injuries where the pain is throbbing like alternating current? In Chinese medicine this is called, "excess condition," would the Pain Pen be draining the excess, or is this something totally different?**

**What about "Deficiency conditions?" Can the Pain Pen work on chronic, dull, achy pain in the muscles that are due to weakness in the muscle tissue. In for example, low back pain where the muscles are in spasm due to weakness?**

**Is there a special way to use the Pain Pen to help muscles that are weak and aching?**

**Once you said you could hold the Pain Pen in both of your hands and direct the fields to where the pain is? Any advice on how we can do that?**

The Pain Pens are made in different ways, for different applications and for different conditions. The PP which you buy from KF is not at all, in any shape or form, like the PP you make yourself. The latest batch of Pain Pens which has left KF are especially different. They are part of a new batch, which are getting made in I think, the next couple of months. We make several hundred PP at a time. Then every couple of months, as they are sold, a new batch gets made with the new structures, or they could also be the same as the previous ones.

For example, the new PP which KF will release are specifically for inflammation. We'll announce it in Thursday's teaching. It's specifically for pain (and inflammation) and you can apply it anywhere. The problem is that most of the people who have pain do not realize that, there is a pain, and then there is also inflammation. So if you get rid of the pain, but not the inflammation, then the pain comes back. Or if you get rid of the inflammation, but energy of the pain has been left in the environment of the inflammation, and if it stays for a long time, then it creates a secondary inflammation.

Before we were only selling the PP, now we'll start selling Inflammation Pain Pens (Pain Pen Enhanced Version 2021- KF Store). Now we're developing the T for what we call, inflammation pain. For example, in lower back pain there is usually inflammation with the pain. The new cycle of Pain Pens will cover the inflammation and the pain. We'll do a new cycle of PP where for example, lower back, which usually has an inflammation with the pain. We'll most probably release these Pens in the next 2 to 3 weeks, because the trials are more or less completed.

For most of you who suffer from back pain and other types of pain, it is usually connected with inflammation. If you don't take care of the inflammation, even if the PP works, you say it doesn't work, because the pain comes back. The PP works on everything, but you have to sort out the inflammation, and now we have released the new Pen to do this. Even if you have a joint pain for 10 years, or for however long, if you follow the procedure, it will work. We are also going to release Gans's for this purpose, and these will be marketed in the next 2 to 3 weeks, because we have completed our trials. As I said, in one of the teachings, I deliberately tested these, because I have had a massive pain in the joints for years since I got injured, or whatever in Dubai. In less than 3 days, there is no pain. I was one of the volunteers who took it up. This is a new understanding, which we transferred 2 or 3 years ago, but now as I was in the lab to produce the materials, and conditions for it, now we have completed it, and it will be marketed.

You can buy Pens or Gans's from the Foundation to use for yourself. It alleviates all the inflammation and the pain. In the cases where sometimes it didn't work was, because you don't sort out the inflammation, even in the joints, and even in arthritis. We have tested it again with an arm injury I had for 28 years, and again, in 2 days the arm injury (pain) was gone using the new development. We will market this most probably next week or the week after. The effectiveness of this new inflammation PP, you will feel it immediately, especially through the Gans's, which will be marketed through the KF. This was the

reason why some Pens work, and some Pens don't work. Now we have clearly defined it, and you can see and feel the difference.

**Q3: Are there hidden properties in the Pain Pen that we don't know about? Once you taught that the Nano Material has plasmatic C14, which makes connection with the Universal Energy. By holding the Pain Pen do we attract Universal and Cosmic energies? How can we convert them to be able to heal our bodies or even feed our cells?**

In certain cases, we know we produce graphene, but it depends how you have created the Nano material. Not all the Nano coated wires in the PP create graphene. The combination of the interaction of the fields of the graphene and the Nano Cu, sometimes, sometimes, very rare times, lead to creation of C14. The C14, if you understand it in a scientific way is Fe, and the combinations of the connections to Fe. Because if you take the C12 and you go to C14, and if you connect, or multiple 4 elements of C14, (4 x 14) you get 56, which is Fe. Part of the structure of the plasmatic condition of our blood is hemoglobin (which contains Fe), and it has that property which absorbs energy from the cosmos through the C14, at 56. This is why from 21st of March, in the part of the teachings where we go into essence of creation, we'll teach this, so that you don't need to eat food.

This is part of the teaching that will come up very soon, because C14 in the cosmic way, is the carrier of the cosmic rays in a specific combination, and in interaction with the plasma of the Fe in the body of the man, will increase the absorption of the cosmic rays. We know that one of the reasons mankind will change his blood when he goes into space, is due to the presence of Fe, and its subdivision to C14. This is how we know that man in the depth of space will not die, even though our amino acid (AA) combination might change. It's through the interaction of the C14, and the Fe composition of the blood, that man will survive without any Oxygen or any food in the space. As he will change and convert himself, to be able to use of the fields of the U through his blood combination.

You got to understand that these are the hidden technologies and knowledge, which we'll release from 21st March as part of the larger teaching of what we call, the Universal Community for man to be able to live in the U. This is how we alleviate the fears of space travel, because man carries blood, and that blood in its structure of the protein has Fe, and that Fe as a plasmatic condition will absorb energies of the U, that even if the protein goes through the conversion, the essence of the protein of Fe of the man will keep the man alive across the U. These are the teachings which will come now, and that have never been known to man. You have to know how you'll survive in the space and gradually we'll start teaching you.

You have to understand something important, why especially South America, Brazil, and Chile have been the focus of our work, it's because the initial travelers from space used this area extensively. There is a reason why South America has got such a huge traffic of the UFO's, and in due time we'll explain it as part of the teaching. It's not that they come here to take something, but the combination of the fields of the Southern American continent, especially Brazil in the depths of Amazon, has a special characteristic of

transferring the energies of C14, into the ... It's like a natural reserve. It's something like when you go to a spa to warm up or to feel good. This is the place where energy taps into the U, what I call one of the fueling stations. This is why frequently South America is visited by the outside, because it's where vast amounts of energy is absorbed for deep space travel.

**Q4: You said in the video the Pain Pen works just like the power generator, because of the double coils of the magnetic and gravitational fields, and that it can transfer power wirelessly. If I point the Pain Pen at a light bulb, does it make enough AC current to light it up? Theoretically is it possible to transfer the AC energy to the light? The copper coils in the Pain Pen should make a plasmatic connection to the electric copper wires in the wall that go to the light. Is it possible, any guidance how to do it?**

When we say as a generator, not as a generator as you understand it with AC current. We understand it as a plasmatic generator. If you can create a plasma light bulb and then point your Pen towards it, yes, you make a connection. Some time ago people randomly tested this by trying to create a transfer of fields with the PP, but it didn't work, because you have to have the right strength in the PP to interact with the light.

The PP works with the light of the muscle of the man when he is in pain. Unless something is connected directly to the light bulb, and at the same strength of the fields, you don't see any interaction, very seldom. This is because the PP is a plasmatic energy generator of itself, and the energy produced by it is in a specific way, due to the coil turns. It's not an AC energy provider that interacts with the light bulb. There is a very big difference, one is a matter state plasma, and one is a plasma from the Gans state of ... or the Nano state of. Especially the present LED lights, there is absolutely zero interaction, more or less.

However, years ago we did do a test on tungsten Nano coated wires. Usually we could find interaction, if we used light bulbs with the old tungsten wires in them. If you remember they used to make them with the springs in the shape like a triangle, or with 4 corners. Because we Nano coated them and replicated the tungsten wires exactly like itself, we used to be able to interact with the light bulb. But that was in very special cases, and we had to make very sure that everything was done in exactly the right way in order for them to interact.

**Q5: The big question that will come up in the teaching, is what to do for people with chronic pain conditions. What about the Pain Pads, don't they use Infinity Loops instead of coils? Do these systems help with healing the underlying cause? This is really the big question to answer. The Gans Patches are perhaps more appropriate, I don't know? But you have to know which Gans's to use, ratios, and I think you have to have the amino acids added back into the Gans's. Is this correct?**

You have to understand why you call it chronic pain, and what's the reason for it to occur. If you understand where the pain is, which muscle and where in that muscle, then you can make a patch that it fits it.

When people make a patch for someone and if it doesn't work, it's because there is a lot that needs to be understood to make the patch right. Of course, there is a general patch which KF sells. But when I make a patch for a chronic condition, I ask maybe 50 to 100 questions before I start to make it. Because you have to understand the depth of the connections to the pain, the position, and how long and what for. Many chronic pains in the body have to do with a specific tissue in the body, that no one considers.

It becomes chronic because doctors don't have a solution for it and they don't understand how to handle it. But in fact, if you make the right Gans for it, then within minutes the pain disappears. The beauty of it is, even if the patient has some kind of paralysis, and it doesn't matter how long they have been paralyzed, the person just starts walking. When it comes to chronic pain you have to understand the cause, the reason, the position and the interaction of the fields in that position, so that you can make the right patch. Otherwise it doesn't work, because the Gans's that you have in the patch, is not of it, (it doesn't have a connecting link) to interact with it. You haven't got the right material in your patch. It doesn't matter even if you have the amino acids, you just repair around the muscle tissues, but you don't repair the actual cause, and then the pain comes back.

Chronic Fatigue (Syndrome), (CFS), which is a general body pain. People with this condition have pain everywhere, and so it has to be handled in a totally different way, then chronic pain in a specific location. You cannot change Fibromyalgia Syndrome (FMS), and what they call CVS, or CVBS, and take it out of the body of the person if you don't follow a specific procedure. One of my secretaries in Europe, was paralyzed for 15 years with CVS and CFS. It meant that if he got up to brush his teeth in the morning, he needed the whole morning to recover. Or if he made a cup of tea, he needed 2 or 3 hours to recover, just from making the tea. In only 3 days after using the system, he started working 15 to 18 hours a day for the Foundation. It's all because we were able to build the right system for his condition. He said, for 15 years I was literally paralyzed, and now I want to serve. He became my personal secretary in Belgium for nearly 7 or 8 years, and he worked 18 - 20 hours a day. He couldn't stop anymore. He said, for 15 years I sat back, (suffering) and not able to do anything. Literally, the doctors gave him a certification for having a chronic condition and not being able to work or do anything. And it took only 3 days. You have to understand what you are doing when it comes to chronic pain. It is not just that you make a patch and expect it to work.

**Q6: The MaGrav, but here he calls the "MaGrav" all of the technology including the plasma water, ZnO, CO2, PP, so when the MaGrav technology works in the body. Does it act by regenerating the cells, putting them back to their original state, or does it act only on the problem, that is with the pain or with the disease?**

Scientifically every cell has a certain period, or time of life. A blood cell lives for 28 days, skin is 28 days, some brain cells only live for a few seconds, because of their higher

value use. So when a cell, be it of the blood, or let's say a cell from the tissue of the heart is created by the interaction of the fields of the neural system and the blood, that position of the cell already has a memory of what it has to be. This is preset by the instructions from the brain. A cell is replaced, when the brain sees it has lost its strength, or it's the set time for the change of the cell. With the new plasma technology we can increase the strength value of that position, so that the cell gets charged back to its original strength, and then it finds its position, to keep that for the next cell.

This is the beauty of the KF knowledge and technology. We'll teach this in the coming time from 21st of March onwards. These are part of the teachings of the essence of creation, what we call creation of M fields, and origin of M fields. When the M fields as a plasma are created in an environment, the environment will keep the memory of their (original) strength. When the time comes that a cell in the body has lost most of its energy, and if you use Gans's, the cell strength will increase back to the value which it is supposed to be. And the position remembers the new value. This is how the new plasma T works. The reason the cells become weaker and weaker, is because the last cycle is remembered by the cell, (and that is what gets replicated.) This is how we get old. And this is how the cell becomes old and needs to be replaced.

Now with the new T we change this process, and hold on to the strength, which is remembered in the environment of the cell. So it doesn't matter when the cell is produced again in that environment, the next cycle, the next week, or the next year, the new standard for cell replication will be set by the Gans material. We'll teach this in detail later on. The Gans materials will bring back the original strength of the cell, that it had at the point of inception, when it was created. This applies to all the cells in the whole body, and that's why we say the cell repairs itself, and that it is not going to stay there for the rest of its life. In 28 days its still going to change its position. It's going to be changed with a new cell, but the energy of the new cell will be that of the original level at the time of inception, which was kept by the environment of the cell area. This is how we will change both the (expired) cells and the damaged cells, by reproducing them back to their original strength, and not to the strength of the damaged ones, the way it was before the Gans's were introduced.

Thank you for tonight and hopefully next time we can teach more and understand from each other.

Mr. Keshe Leaves ..

### **Key Phrases**

### **Summary of Topics:**

Pain Pen (PP) - answers our questions.

How the PP works, it's plasmatic not AC/DC  
The pain discharges into the PP  
New Inflammation PP  
Not all of our Nano coating create Grapheme or C14, very little  
Teach Universal Energy later  
Transfer energy with PP plasmatically need a connection  
Chronic Pain teaching, have to understand cause, and chronic inflammation ..  
Resetting body cells back to original strength at time of creation.

## **English Transcription:**

excerpt from yesterdays teaching 369 KSW

(:14). Vertical Enhancement Unit ..

(:23). Soon we'll have a website selling products here in Brazil

## **Mr. Keshe .. (:27)**

(:27). K- Good evening, thank you very much for tonight's program, if there are any questions that KS would like to ask.

Q: I have some questions we are preparing for the Church teachings. We have a KS here. If that's ok. I will read in Portuguese first . ..

(:30). Our purpose is to teach the Pain Pen in the Church Education teachings, so we want to be able to teach it in a very simple easy way. To do that, we need to understand it more clearly. Therefore we would like to ask you some detailed questions, if that's okay? Thank you very much.

You taught the Pen Pain some years ago and we listened carefully to that teaching. We understood from the teachings that the pain in the body comes about through fields oscillating in the muscle tissue, and that this creates a kind of alternating current (AC), and that the tissues around the pain have a steady current flow and not oscillating.

Then you said that the double coils (M and G) in the Pain Pen is creating alternating current (AC), and that this current is directed through the tip, which is pointed at the place where the pain is. The copper in the Pain Pen connects to the copper in the muscle tissue and nerve tissue, creating a field link, and they start transferring fields. That there is no need to touch the skin because the flow in the Pain Pen will automatically find the oscillating fields of the pain in the muscle. The MG fields in the Pain Pen balance out the MG fields in the nerves so they don't send back signals of disturbance to create pain. In a way, it tricks the nerves not to send pain to that area.

Is our basic understanding correct?

K- Maybe if we redefine it, that it's understood in the terms of plasma it will be much easier. (:32). The PP has the present PP which you produce with the Nano (N) coated

material has a specific characteristic, that in essence it's weaker in G, and stronger in M in one sense on one layer, and stronger in G and weaker in M in the other. You have the Cu wire inside, and you have a N Cu on top. You created M fields, which in essence is weaker than the energy which is the pain of the body, and the pain which has a higher energy, would deliver its energy to the Pen absorbed by the N layer, trying to reach the Cu fields. And the Pen becomes a weaker partner compared to the pain inside. And that is how you take the pain out. It doesn't send a message to the brain, that don't send it. It takes the pain out, that the body can repair the damage. This is the correct way to understand it. (:34). It's the interaction of 2 plasmatic fields, the Gans of the body, inside, which is like a virus, has more energy, and the Pen which is weaker by the Cu inside, and the N layers stronger outside, so it drains out the M field energy of the pain, inside, into the Pen, and the N layers absorb it to itself. This is how the pain is taken out, it doesn't send a message to the brain, not to send anymore pain. Literally, because it takes the pain out, pain creates a barrier for repair. The body immediately at the point of damage creates the condition of the repair, and that's why the pain goes. Or sometimes the pain is due to tension, pressure on the cell. And the pain, when it takes that energy out, then the pain is not there to be felt. It's very much, the pain is very much like a virus we see in Corona. It's a package of energy, but it sits across the environment located in the body, with the Pen we create that water from outside. We drain it out, and because it is drained out, the body immediately creates the repair condition, and you might have to use it 2 or 3 times, because as the cell repairs it creates its own pain, and the Pen can take it out. The PP is exactly how we handle the viruses. The virus is the energy of the pain inside the body, and the Pen is the water we put outside to extract it, or the pads we put outside to extract it. The Cu inside is weaker, the N layer is stronger. In a way the energy of the Cu being weaker inside, (:36). attracts the energy of the plasma of the Gans directly through the N layer field strong into it, and then it gets absorbed by the N layer, and then it gets disposed of. This is the correct way of understanding it.

Translate... (:38). May I continue here?

K- Yes, the understanding of the T has to be always on the basis of the interaction of plasmatic fields. In plasma fields of the Gans of the body, there is no AC/DC, there is no alternative current and direct current. Everything is in the motion of the M fields, and this is what has to be understood, and not to see it and then try to translate it into the matter state, that you understand. It's a new understanding, understanding as it is, not to translate it back into a matter state to, for you to make sense, but in fact comes totally wrong.

(:40). Translate ..

K- This is fundamental point in all the teachings, when you work with the plasma, only consider the plasma interaction, not trying to transfer it, and translate it into the matter state, AC/DC, in plasma there is no alternative current. It's always DC, and AC comes when you interact with the matter state. The body of the man is always in a very low level of DC current of plasma, which we don't have in the matter state, and it always has a heartbeat. And this is how life is generated. A DC current with a heartbeat, which creates that pulse of a plasma, but not a frequency in a matter state.

Translate .. (:42).

K- This is the fundamental work of the body of the man. You have the flow of the M field in the body, but you have a heartbeat, which creates that pulse of fields to have different strength. This is different then when you have a AC or DC, that you have a, what we call, frequency on it. In the matter state, we see the penetration of the field by vibration of the electrons. In the plasma state we have the continuous flow, and we create pulses that, that continuous flow, it releases its energy through interaction. In a way, if you look at it, it's like a balloon which you keep on hitting it, and the fields will flow in the balloon, but there is no current. This is what most of the KS have not comprehended about the difference between the work of the plasma and the AC and DC, and that is why you define it like this, that it changes to AC or DC. We don't have AC/DC in plasma flow, but we have a continuous flow with the pulses, that, that pulses by compressing the M field, (:44). it creates them to interact with each other, and creates friction and release of energy, that's how the body has a heart and a blood flow. This is how through the lymph flow we release energy to ourselves. That's why when we stop the heartbeat, the life stops. This is the fundamental change, or difference between the matter state and the plasma state. And the body of the man is in the plasma (P) state, Earth works in a P state, the Sun works in the P state. It continuous radiates, but through the heartbeat decides what strength I'll release in different directions at the same time.

Translates .. (:46).

K- Any other question.

Q: .. you answered a lot about the PP, but let's go with the flow. Let me translate first in Portuguese. There is a question here in Chinese Medicine.

Q: Is it correct that the Pain Pen can only help certain types of pain, like injuries where the pain is throbbing like alternating current? In Chinese medicine this is called, "excess condition," would the Pain Pen be draining the excess, or is this something totally different?

What about "Deficiency conditions?" Can the Pain Pen work on chronic, dull, achy pain in the muscles that are due to weakness in the muscle tissue. In for example, low back pain where the muscles are in spasm due to weakness?

Is there a special way to use the Pain Pen to help muscles that are weak and aching?

Once you said you could hold the Pain Pen in both of your hands and direct the fields to where the pain is? Any advice on how we can do that?

K- There are PP made in different ways. For different applications, for different conditions. The PP which you buy from KF is not at all, any shape or form, the PP you make yourself. The PP, especially the latest batch which has left KF, and there is a new batch which is getting built in the next, I think, the next couple of months, because we make several hundred at a time. Then every couple of months as they are sold, the new batch (of Pen's) is made with the new structures, (:50). or of the same as the past. The new Pens, which KF will release is specifically for inflammation, for example. We'll

announce it on Thursday. It's specifically for pain, that you can apply it anywhere. The problem with most of the people who have pain is that, they do not realize, there is a pain, and there is inflammation. You can get rid of the pain, but (if) you don't get rid of the inflammation, the pain comes back. Or you get rid of the inflammation, but the pain has left in the environment, in energy of the pain is in the environment of the inflammation, and (if) it stays for a long time it creates a secondary inflammation. This is where the new Pens, now, before we always sell the PP, now we sell Inflammation Pen. We'll do a new cycle of PP where for example, lower back, usually has an inflammation with the pain. Now we develop the T, that, what we call, inflammation pain, is just for the inflammation. And the new Pen's for pain, is just for the pain, and we most probably release a pain, inflammation Pen, in the next 2 - 3 weeks, because the trial is more or less complete. This will show you, most of you suffer pain in back, or for other pains, but it is usually connected with inflammation. (If) you don't take the inflammation, (:52). so it works, you say it doesn't work. The PP work on everything, but you don't sort out the inflammation, and now we have released this, that even if you have a joint pain for 10 years, whatever, if you follow the procedure, and we release Gans's, which are for this purpose, and these will be marketed in the next 2 - 3 weeks, we have completed our trials. As I said, in one of the teachings, I deliberately tested these, because I have had a massive pain joint, for years since Dubai, I got injured, or whatever in Dubai. In less than 3 days, there is no pain. I was one of the volunteers who took it up. This is a new understanding, which we transferred 2 or 3 years ago, but now as I was in the lab to produce the materials, and conditions for it, now we have completed it, and it will be marketed. You can buy Pens or Gans's from the Foundation that you can use it. And it'll alleviate all the inflammation and the pain. This is where sometimes it works, and sometimes it doesn't work, because you don't sort out the inflammation, even in the joints, even in arthritis. (Sorry about that, it was a very long one, but you have to translate. R: I was writing down here).

Translation ... (:54) . (:56).

K- We have tested it again. I have had an arm injury for 28 years, and again in 2 days the arm injury has gone, using the new development. We will market this most probably next week or the week after. The effectiveness of this new inflammation PP, you will feel it immediately, especially through the Gans's, which will be marketed through the KF. This is how, why some Pens works, some Pens don't work. Now we clearly define it, and you can see, you can feel the difference.

Translate (:58).

Q: Are there hidden properties in the Pain Pen that we don't know about? Once you taught that the Nano Material has plasmatic C14, which makes connection with the Universal Energy. By holding the Pain Pen do we attract Universal and Cosmic energies? How can we convert them to be able to heal our bodies or even feed our cells?

K- We know we produce grapheme in certain cases, it depends how you have created the Nano material. Not all the N coated wires in the PP create grapheme, and the combination of the interaction of the fields of the grapheme and the N Cu, sometimes,

sometimes, very rare times, lead to creation of C14. Because the C14, if you understand it is, in a scientific way, is Fe, and the combinations of the connections to Fe. Because if you take the C12 and you go to C14, and if you connect, (1:00). or multiple 4 elements of C14, you get 56, which is Fe. Part of our structure of the plasmatic condition of our blood, hemoglobin, has that property that absorbs energy from cosmos, through the C14, at 56. This is why part of the teaching very soon, when we go into essence of creation from 21st of March, we teach this, that you don't need to eat food. This is part of the teaching that will come up very soon, because C14 in the cosmic way, is the carrier of the cosmic rays in a specific combination, in interaction with the plasma of the Fe in the body of the man, will increase the absorption of the cosmic rays. This is one of the reasons mankind in space we know will change his blood, due to presence of Fe, and its subdivision to C14. This is how we know man in the space, in the depth of space will not die. Even our amino acid (AA) combination might change, but through the interaction of the C14, Fe composition of the blood, man will survive without any O, (1:02). without any food in the space, as he will change and convert to use of the fields of the U through his blood combination. You want to translate. Before you translate. You got to understand these are the hidden T and knowledge which we'll release from 21st March as part of the larger teaching of the, what we call Universal Community for man to be able to live in the U. This is how we alleviate the fears of space travel, because man carries blood, and that blood in its structure of the protein has Fe, and that Fe as a plasmatic condition will absorb energies of the U, that even if the protein goes through the conversion, the essence of the protein of Fe of the man will keep the man alive across the U. These are the teachings which will come, which have never been known to man. You have to know how you'll survive in the space and we'll start teaching gradually. You have to understand something important, South America, Brazil, Chile, which has been the focus of our work, especially, is because the initial travelers of the space used this area extensively. There is a reason for it, and in due time we'll explain as part of the teaching, why South America has got such a huge traffic of the UFO's. (1:04). It's not that they come to take anything, but the combination of the fields of the Southern American continent, especially Brazil in the depth of Amazons has a characteristic in transferring energies of C14, into the, it's like a natural reserve. It's something like you go to a spa to warm up or to feel good. This is the place where energy taps up the U, what I call one of the fuel stations. This is why frequently S America is visited by outside, because it's where vast amounts of energy is absorbed for deep space travel.

Q: You said in the video the Pain Pen works just like the power generator, because of the double coils of the magnetic and gravitational fields, and that it can transfer power wirelessly. If I point the Pain Pen at a light bulb, does it make enough AC current to light it up? Theoretically is it possible to transfer the AC energy to the light? The copper coils in the Pain Pen should make a plasmatic connection to the electric copper wires in the wall that go to the light. Is it possible, any guidance how to do it?

K- When we say as a generator, not as a generator as you understand, with the AC current. It's a plasmatic generator, and this is what we understand. If you can create a plasma light bulb and then you put your Pen towards it, yes you make a connection.

Some people have randomly tested, (1:12). trying to create a transfer of fields with the PP some time ago, and it doesn't work because you have to have the right strength to interact with. The PP works with the light of the muscle of the man when he is in pain, but very seldom, unless something is connected directly to the light bulb and at the strength of the fields, you don't see any interaction. Because PP is a plasmatic energy generator of itself, and the energy produced is in a specific way because of the coil turn. It's not an AC provider of the energy that interacts with the light bulb. There is a very big difference, one is a matter state plasma, and one is a plasma from the Gans state of, or Nano state of. You got to understand, especially the present LED lights, there is absolutely zero interaction more or less. You can translate.

Translates .. (1:14).

K- Years ago we did a test on a tungsten N coated wires, and usually we could find interaction if the old tungsten wires, light bulbs were used, if you remember. It used to be like a spring and like a triangle or like 4 corners, and because we replicated the tungsten wires exactly like itself, we N coated it and we used to be able to interact with the light bulb. But that was very special cases and we had to make very sure, the right way, everything is correct to interact.

Q: The big question that will come up in the teaching, is what to do for people with chronic pain conditions. What about the Pain Pads, don't they use Infinity Loops instead of coils? Do these systems help with healing the underlying cause? This is really the big question to answer. The Gans Patches are perhaps more appropriate, I don't know? But you have to know which Gans's to use, ratios, and I think you have to have the amino acids added back into the Gans's. (1:18). Is this correct?

K- You have to understand why you call it chronic pain. What's the reason of it. And again, as was said, you have to make, understand, where the pain is, which muscle, and where about in the muscle, then you can make a patch that it fits it. There is a need to understand a lot, when people say you made a patch for me, it doesn't work, because when we make a patch, there is a general patch which KF sells, but if I make a patch for a chronic condition, I ask maybe 50, a 100 questions before I make a patch for it. Because you have to understand the depth of the connection of the pain, and the position, and how long and what for. Many chronic pain of the body is to do with a specific tissue in the body, that no one considers. It becomes chronic because doctors don't have a solution for it. They don't understand how to take it, but in fact, if you make a right Gans with it, within minutes the pain disappear. And the beauty of it is, even if most of them create some kind of paralysis, the person just walks, it doesn't matter how long they have been paralyzed with it. (1:20). You have, when it comes to chronic pain you have to understand the reason, the cause, the position and the interaction of the fields in that position that you can make a right patch. Otherwise it doesn't work, it's because the Gans's, you have in the patch or whatever, is not of it, to interact with it. You haven't got the right material in your patch. It doesn't matter even if you got AA, you repair around it, what the muscle tissues are, but you don't repair the actual cause, and then they (the

pain) comes back. Chronic fatigue which is a general body pain, that people, pain everywhere, this has to be handled totally different way than chronic pain in location. You cannot change FMS and what they call CVS, or CVBS, out of the body of the person if you don't follow a specific procedure. We have one of my secretaries in Europe, he was paralyzed for 15 years with CVS and CFS. Which means if he got up to brush his teeth in the morning, he needed the whole morning to recover just to brush. If he made a cup of tea, he needed 2 or 3 hours to recover from just making the tea, and in 3 days he started working 15 - 18 hours a day. Getting the right system, (1:22). for his condition, building the right system for his condition. Because of that, he said, for 15 years I was literally paralyzed, now I want to serve. He became my personal secretary in Belgium for nearly 7 or 8 years, and he worked 18 - 20 hours a day, he couldn't stop anymore. He said, 15 years I sat back, and he was suffering from, he had doctors, literally gave him certification for being chronic, couldn't do anything. And it took 3 days. You have to understand what you are doing when it comes to chronic. It is not just you make a patch and it has to work.

(2:14).

Q: The MaGrav, but here he calls the MaGrav all the T the plasma water, Zn, CO<sub>2</sub>, PP, so when the MaGrav T works in the body. It acts regenerating the cells, putting them back to their original state, or it acts only in the problem that is with the pain or with the disease?

K- ... Scientifically every cell has a certain period of time of life, like a blood cell stays for 28 days, skin is 28 days, some brain cells have a few seconds life, because of their higher value use. So when a cell be it of the blood, or say a cell of let's say, a tissue of a heart, is created by interaction of the fields of the neural system and the blood, (2:16). that position of the cell already has a memory of what it has to be. This is preset by the instruction by the brain. So when a cell is replaced, is when the brain sees the cell has lost its strength, or it's a time for change. With the new plasma T, we can increase the value strength of that position, that the cell gets charged to its original strength, and then finds its position to keep that for the next cell. This is the beauty with the KF T and knowledge,

we teach this in the coming time, as we said, as we go on 21st of March. These are part of the essence of creation, what we call creation of M fields, origin of M fields. M fields as a plasma, when they are created in an environment, the environment will keep the memory of the strength. And so is when a cell in the body has lost most of its energy. When you take Gans's it will increase it to the value which it has to be, and the position remembers the new value. And this is how the new plasma T works. Because when and as, the cycle has become weaker and weaker for the cell, the last cycle is remembered by the cell. and that's how we get old, or that's how the cell becomes old to be replaced. (2:18). Now with the new T we change, and hold on to the strength in the environment of the cell itself, that the cell, it doesn't matter next one, next week, next year, produced in that environment, will have the new standard set by the Gans material. This in detail we teach later on. So the Gans materials bring the energy back to the cells to the limit of the original, at the point of inception, when they were created. and this applies to all the body, and that's why we say the cell repairs itself. That cell is not going to stay there for the rest of its life. In 28 days still its going to change its position. It's going to be changed with a new cell, but the energy of the new cell will be of the original level, which was kept by the environment at the inception of the cell area. This is how we will change, and cells and damaged cells will, when they are produced, are produced to the matching of the original, not the matching of the damaged one, when before Gans was introduced. Thank you very much.
